Career and Technology Education (CTE): Educating Tomorrow’s Workforce Today

Career Technology Education (CTE) provides high school and community college students an opportunity to pursue a sequential technical and academic program of study leading to advancement in a career field. High school CTE programs of study give students the opportunity to transition smoothly into further education or postsecondary education and to earn college credit and/or industry credentials in a career field of interest.

Maryland leads the nation in the redesign of CTE programs as called for in the federal Carl D. Perkins Career and Technical Education Improvement Act of 2006. The Maryland State Department of Education (MSDE) works closely with the Governors Workforce Investment Board (GWIB) to identify new programs in response to Maryland’s workforce development needs and to ensure all CTE programs of study keep pace with industry expectations and prepare students for their next steps toward college and careers.

Career Clusters: The New Career Technology Education (CTE)

MSDE in partnership with statewide industry advisory groups, identified ten (10) Career Clusters that represent core business functions across broad industry areas in Maryland. Business partners further identified career pathways based on the end-to-end business processes within career clusters. This representation of industry clusters and career pathways is provided in the MSDE publication Maryland Career Clusters: Restructuring Learning for Student Achievement in a Technologically Advanced, Global Society and serves as a starting point for the identification of Maryland CTE programs of study. Career Clusters allow students to explore a wide range of career options and to apply academic and technical skills in a career area. Career Pathways are like road maps of learning that help students plan for and pursue further education and careers.

Using the Career Clusters Framework to develop new CTE programs at the high school helps students gain a better understanding of the world of work and what is required to prepare for a career. Each Career Cluster includes at least two CTE program options for students to gain more advanced understanding and preparation for a career field. For example, the chart below depicts the wide range of career fields in the Arts, Media, and Communication industry in Maryland. Students may choose from three CTE programs or arts-based programs to further explore these careers.

Maryland’s CTE Career Clusters
- Arts, Media, and Communication
- Business Management and Finance
- Construction and Development
- Consumer Services, Hospitality, and Tourism
- Environmental, Agricultural, and Natural Resources Systems
- Health and Biosciences
- Human Resource Services
- Information Technology
- Manufacturing, Engineering, and Technology
- Transportation Technologies

High School Programs of Study

Art, Music and Drama courses and programs are offered through the high school art department. These are not CTE programs of study.

For more information about Maryland’s Career and Technology Education programs, go to www.MarylandPublicSchools.org. Click first on Divisions and then on Career and College Readiness.
Maryland CTE Programs of Study

Maryland CTE programs of study are statewide model programs designed to prepare high school students for the 21st Century’s global economy and its rapidly changing workforce needs. All CTE programs are aligned to established academic and technical skill standards to ensure student preparation for college and careers. These programs also include work-based learning opportunities (e.g., internships, clinical experiences, or industry-mentored projects) tied to the student’s area of interest. Upon completion of a Maryland CTE program of study, students also have the option to earn college credits and/or industry-recognized credentials such as certifications and licenses.

The Maryland CTE programs of study outlined in this document serve as a resource for local school systems and their community college partners. The programs included in this document are MSDE-developed programs designed with state and national-level partners, are standardized across the state and include opportunities for state-wide professional development for teachers. For each Career Cluster, MSDE has identified several new Maryland CTE programs of study for development. Most of the programs listed have been completed and are offered throughout Maryland. However, several programs are currently under development. Please review the program descriptions for specific information regarding each Maryland CTE program of study.

The Maryland State Department of Education, in collaboration with business, higher education, and local school systems provides guidance and support for the ongoing development of rigorous and relevant CTE programs of study that prepare students for both college and careers. Local school systems are encouraged to adopt the Maryland CTE programs of study outlined in this publication and to partner with higher education in supporting student transition to postsecondary education and careers. The MSDE is also collaborating with school systems, business and higher education to develop and expand CTE programs in high-demand careers, such as those in the Science, Technology, Engineering and Mathematics (STEM) disciplines.

Given that CTE programs are closely aligned with regional economic and work-force development priorities, not all high schools have programs in all career clusters. Based on local needs and opportunities, each school system decides which clusters and corresponding CTE programs to offer. For more information about local CTE programs of study, please contact the local school system or go to www.MarylandPublicSchools.org for a link to the school district’s web site.

Preparing Today for the Jobs of Tomorrow

CTE programs are designed to support students in making decisions about education and career options. While students generally enroll in a CTE program in 10th or 11th grade, career exploration begins far earlier. In middle school, students participate in career-awareness activities—for example, field trips, job-shadowing, interest inventories—and develop high school plans, mapping out academic coursework and career options.

Today, high school students face many options for academic growth and career exploration. Making informed choices about their high school program of study will prepare them for success in further education and lead to a rewarding career. Students may learn more about career opportunities for Maryland graduates at www.BeWhatIWanttoBe.com.

Program Highlight: Career Research and Development (CRD)

To support students in learning about careers, work-based learning opportunities are made available to all CTE students. Supervised work-based learning experiences allow high school students on-the-job training related to their career choice. Students may also elect to complete the work-based learning CTE program, Career Research and Development (CRD). The program is designed to link the classroom with specific work experiences and includes two school-based courses followed by at least two work-based learning credits (generally in the last year of high school). These experiences are organized around a work plan that is cooperatively developed by the school coordinator and employer to add value to and extend a student’s career preparation. Students in CRD can be placed in positions related to any of Maryland’s 10 career clusters.

The people of Maryland are our greatest asset, and our continued economic strength depends upon our ability to invest in them and prepare our children today for the jobs of tomorrow.

- Governor Martin O’Malley
Sample High School Program of Study

Students electing to complete a CTE Program as part of the high school program are prepared for entry into college and a career pathway. The chart below shows a typical high school program of study that includes a CTE Program Sequence beginning in Grade 10. It also depicts how students can earn industry certification and/or college credit while in high school.

In Maryland, all secondary and postsecondary programs are offered in related programs of study to advance student preparation and success in a career. However, specific program offerings vary by location. Contact the local school systems and/or community colleges who work together to identify areas of interest and program requirements.

In most CTE programs, the awarding of college credit and/ or industry certification requires students to meet pre-determined standards and assessments as determined by the postsecondary institution and/or industry. A description of these requirements and opportunities for college credit and/ or industry certification is included for each CTE program of study.
Maryland offers great opportunities for careers in the Arts, Media and Communication Career Cluster. Students interested in this cluster combine creative abilities with technical skills and knowledge that prepare them for careers in Broadcast Production, Graphic Communications, Web Design, Interactive Media and Game Design. Maryland CTE programs include a focus on mass communication and broadcast journalism, graphic communication, and multimedia production. Working with people from the industry helps ensure that our programs keep pace with the industry. These programs include options for students to earn industry certifications and college credit toward advanced study in the career field.

### High School CTE Program

| Program Highlight: Graphic Communications (PrintED) | Graphic Communications (PrintED) is offered in partnership with the Printing and Graphics Association MidAtlantic (PGAMA). This program of study is designed to give students an overall understanding of the industry and its major operations while teaching academic and technical skills required in the field. Students can gain industry certification through PrintED in several areas, including: Introduction to Graphic Communication, Digital File Preparation, Digital Press and Offset Press. While gaining the technical skills they need to succeed in this career pathway, students can also earn college credits through articulation agreements. |

| **Graphic Communications (PrintED)** | For more information about the Graphic Arts Education and Research Foundation and the PrintED program standards, please go to: www.gaerf.org/printed |

| Interactive Media Production | The Interactive Media Production program includes a strong foundation in arts and communication with particular emphasis on graphic and media communications, interactive technologies, and project development. Students complete two foundation courses in Arts, Media and Communication and Interactive Media Production before selecting one of two options for advanced study – Interactive Media Production or Simulation and Gaming. |

| **Interactive Media Production** | Interactive Media Production students gain experience in internet technology and website development, computer graphics, digital media production and project management. Simulation and Gaming students advance their understanding and skill level in computer game design and interactive programming. All students develop a portfolio of their work and may earn certification in Adobe Creative Suite or web design. Graduates may also earn articulated college credit. |

| • Advanced Interactive Media | • Simulation and Gaming |
| • Digital File Preparation | For more information about the related industry certifications for Adobe Creative Suite, please go to: www.adobe.com |

| World Organization of Webmasters, | For more information about industry certification for web design and the World Organization of Webmasters, please go to: www.joinwow.org |

| Program Highlight: Graphic Communications (PrintED) | All 21 CTE Graphic Communications programs in Maryland have earned or will soon earn the Graphic Arts Education and Research Foundation's industry certifications in PrintED. Students earning certification are eligible for college credit through statewide articulation agreements. |
Program Highlight: Academy of Finance

The National Academy of Finance (NAF) prepares students for careers in the financial services industry—accounting, banking, insurance, securities, and real estate, among others. The Academy is predicated on close partnerships with the local business community. As part of the program, students must complete an internship during their junior or senior year. Achievement among NAF students is remarkable. In one school system, 100% graduate from high school, 95% meet the University System of Maryland’s entrance requirements, and 92% are in college or working after high school.
Program Highlight: Construction Trades and Maintenance

Construction and Development
Advances in science and technology will continue to drive innovation in the design, construction, and maintenance of buildings and infrastructure, including new design concepts, construction materials and methods, and the application of information technology. Maryland high school construction-related programs allow students to advance their knowledge in specific construction trades, design or construction management.

High School CTE Program

Construction Design and Management
For more information regarding industry certification, please go to: www.autodesk.com

The Construction Design and Management program is currently under development. Students will be engaged in each phase of the design and construction process as they progress through the program. The first two courses require students to use design software to complete several projects and plans, including the use of 3-D modeling tools. In the advanced courses, students work in teams to complete a development project, with emphasis on construction standards; coordination of the construction process; estimating, planning and scheduling; and site management. Students may earn industry certification through Autodesk and/or college credit through articulation agreements with Construction Management programs.

Construction Trades Professions
• Carpentry
• Electrical
• Plumbing
• Masonry
For more information on program standards, certification and NCCER, please go to: nccer.org

The Construction Trades Professions programs are based on the National Center for Construction Education and Research (NCCER) standards and prepare students for further education and careers in the construction industry, with a focus on Carpentry, Electrical, Plumbing, or Masonry. Additional curriculum modules covering project management and project supervision as it relates to all areas of construction are offered as resources and support articulation to postsecondary Construction Management programs. Graduates meet Apprenticeship Training requirements and may earn industry certification and college credit through articulation agreements with community colleges.

Construction Maintenance
• Heating, Ventilating, Air Conditioning (HVAC)
• Industrial Maintenance
• Welding
For more information on program standards, certification and NCCER, please go to: nccer.org

The Construction Maintenance programs are based on the National Center for Construction Education and Research (NCCER) standards and prepare students for further education and careers in the construction industry, with a focus on Heating, Ventilating, Air Conditioning (HVAC); Industrial Maintenance; or Welding. Additional curriculum modules covering project management and project supervision as it relates to all areas of construction are offered as supplemental resources and support articulation to postsecondary Construction Management programs. Graduates meet Maryland Apprenticeship Training requirements and may earn industry certification and college credit through articulation agreements with community colleges.

Consumer Services, Hospitality and Tourism

Programs in consumer services, hospitality and tourism prepare students for a variety of career options and further education. Each program includes options for students to earn industry certifications and college credit in the career field. Students, who are interested in culinary arts, restaurant management, lodging management, or cosmetology, engage in real-world experiences through internships and mentoring opportunities. These allow students to apply their classroom instruction in meaningful ways, and they give them (through licensure or certification) a head start into the profession.

</table>
Program Highlight: Curriculum for Agriculture Science Education (CASE):

In this program, students learn about all aspects of agricultural sciences and may take additional courses based on their area of interest. The following courses will be offered as part of the program:

- Introduction to Agriculture, Food and Natural Resources
- Principles of Agricultural Sciences - Plant
- Principles of Agricultural Sciences - Animal
- Animal and Plant Biotechnology
- Food Science and Safety
- Agricultural Business, Research and Development

The Curriculum for Agriculture Science Education (CASE) is a national program of study that offers a rigorous curriculum designed to challenge students to perform at high levels. Through the use of activities, projects, and problem-solving, students explore agricultural subject matter while they learn necessary knowledge and skills. To establish these requirements, CASE incorporates the National Academic Standards and Agriculture Food and Natural Resources (AFNR) Content Standards. The program is a four-course sequence and will offer students the opportunity to earn college credit upon successful program completion. For more information about CASE, please see the program highlight at the bottom of this page.

Horticultural Services: Certified Professional Horticulturist (CPH)

The Horticultural Services program of study is based on requirements for the Certified Professional Horticulturist (CPH) certification used by the Maryland “Green Industry.” Students complete a sequence of courses which include including: Introduction to Environmental/Plant/Animal Science, Foundations of Horticulture, Plant Production, and Landscape Design and Management. Students have the opportunity to earn the Student-Level CPH certification by taking and passing the industry exam.

Environmental Studies/Natural Resources

The Environmental Studies/Natural Resources program of study is composed of a four-course sequence that covers both environmental and natural resource management technologies and current issues related to these fields of study. This program incorporates green construction and technologies and the impact of today’s environment on our natural resources. The program includes an emphasis on research and the ethics involved in making decisions that impact our ecosystem. Students will engage in technical research and writing as it relates to real-world problem solving. Students will also have the opportunity to earn college credit through articulation agreements with Maryland colleges (currently under development).

Environmental, Agriculture and Natural Resources

The agricultural sector is a highly competitive global industry creating new challenges in identifying global and domestic markets; improving business planning, financing, risk management, and productivity; and reducing costs. Advances in science and technology, in particular biotechnology, will continue to drive innovation and growth in this career cluster. Growing public concerns over natural resources, environmental quality, and public health will continue to expand the role and scope of the natural resource management and environmental services sectors.
Health and Biosciences

Career and Technology Education programs in the Health and Biosciences Cluster focus on preparing dedicated professionals with the knowledge and skills necessary to pursue challenging and rewarding careers and further education. These programs require students to apply knowledge learned in science and mathematics to professions in the Health and Biosciences field. These careers are among the fastest growing and highest in demand in the country as the population ages and health care needs continue to increase. These CTE programs prepare students for positions in direct patient care settings, research and laboratory facilities, as well as for opportunities in business and management related to health care. The Health and Biosciences Cluster also provides career development experiences for students who want to pursue careers in the medical professions including physicians, research scientists, nurses, and a wide variety of exciting careers.

High School CTE Program

**Academy of Health Professions (AOHP)**
- CNA / GNA
- Pharmacy Tech
- Dental Assistant

For more information about requirements in the field of Health Care, please visit the Maryland Board of Nursing website at: www.mbon.org

**Biomedical Sciences: Project Lead The Way (PLTW)**

For more information about Project Lead The Way, please go to: www.pltw.org

CTE Program Description:

The Academy of Health Professions program uses project and problem-based learning, clinical experiences, as well as classroom and lab instruction to teach students about the field of health care. Students progress through two foundation courses: Foundations of Medicine and Health Science and Structure and Functions of the Human Body. Opportunities for students to apply what they are learning to real-life health care situations are part of a specialized health care course and a scientific research course. Students will also have the opportunity to earn state and/or nationally recognized certifications, and/or college credit through articulation agreements with local colleges.

The Biomedical Sciences program is based on the National Standards for Science, Mathematics, and English Language Arts and the Accountability Criteria for the national Health Care Cluster Foundation Standards. The program consists of a sequence of four courses: Principles of the Biomedical Sciences, Human body Systems, Medical Interventions, and Biomedical Innovations. Students who complete the program are prepared for employment and further education. Stevenson University, Maryland's PLTW Biomedical Sciences Affiliate University, offers transcripted credit to students who successfully complete the program.

Program Highlight: Biomedical Sciences

Maryland is one of the first states in the country to implement the Biomedical Sciences program developed by Project Lead the Way (PLTW). Instructors in the program report that their students are very engaged in and highly motivated by the structure and content of the program. The PLTW Biomedical Sciences program is a problem and project based curriculum where students work to solve real-world problems using scientific methods and research techniques. The science content of the first course is well aligned to Maryland's Biology HSa and reinforces what students are learning in their science courses. The goal of the PLTW program is to produce an increasing and more diverse group of students to be successful in science, engineering and biotechnology programs at the four and two year college level. Students enrolled in the program take the following sequence of courses: Principles of the Biomedical Sciences, Human Body Systems, Medical Interventions, and Biomedical Innovations. Stevenson University provides professional development to the PLTW Biomedical Sciences instructors.

“Maryland’s bioscience industry employment is growing robustly, rising 14.5% for 2001-2006, adding more than 3,200 jobs to reach well over 25,000.”

*MD Life Sciences Strategic Plan: The Current Competitive Position of Maryland, 2009*

</tr>
<tr>
<td>Childcare and Early Childhood Education</td>
<td>The Childcare and Early Childhood Education program will be developed to provides an overview of learning theory and practice with an emphasis on early childhood. This program will prepare students to teach students ranging in age from infancy through eight years. Students will also have the opportunity to earn industry certification and college credit.</td>
</tr>
<tr>
<td>Teacher Academy of Maryland (TAM)</td>
<td>The Teacher Academy of Maryland program prepares students for further education and careers in the education profession. The program focuses on human growth and development through adolescence, teaching as a profession, curriculum and instruction and an education academy internship. Upon completion of the program and passing the ParaPro test or PraXiS i, high school graduates are ready for employment in the teaching profession. This program is based on the outcomes of the Maryland Certificate of Associate in Arts in Teaching (A.A.T) degree, which aligns with the yet to be developed National Council for the Accreditation for Teacher Education standards.</td>
</tr>
</tbody>
</table>

### Program Highlight: Teacher Academy of Maryland (TAM)

The Teacher Academy of Maryland (TAM) introduces students to the teaching profession and gives them a jump on college coursework. TAM students can enroll directly in a four-year college with a teacher education program, netting credit for their high school program. Or they can enroll in any of the 13 community colleges statewide that offer the articulated Associate of Arts in Teaching degree—a two-year degree whose coursework transfers to any in-state 4-year college (public or private) with a teacher-preparation program. Towson University, which graduates about one in every four teacher candidates—far more than any other college in Maryland—is the state’s program partner, offering both transcripted credit and scholarships to TAM graduates.

For more information, please visit: [www.towson.edu/coe/tam/index.asp](http://www.towson.edu/coe/tam/index.asp)

For more information about the Parapro test or PraXiS i, high school graduates are ready for employment in the teaching profession. This program is based on the outcomes of the Maryland Certificate of Associate in Arts in Teaching (A.A.T) degree, which aligns with the yet to be developed National Council for the Accreditation for Teacher Education standards.
Information Technology

Information technology professionals will face increasing pressure to design, develop, implement, and support more complex and reliable information technology solutions that will meet the needs of external and internal customers. This will require that information technology professionals have the skills to determine customer and business needs and requirements, manage complex projects, and integrate software and hardware solutions. Maryland CTE programs include opportunities for students to focus on software development, programming or to place greater emphasis on developing knowledge and skills related to IT hardware and networking technologies. Cyber Security is an increasingly important part of Information Technology (IT) programs and represents expanding opportunities for employment and advanced education and training in Maryland. As students progress through these IT programs, additional options for Cyber Security and Information Assurance is provided.

High School CTE Program

Academy of Information Technology (NAF)
- IT Programming
- IT Networking
- Web Design

For more information about NAF, please go to: www.naf.org

Database Academy (Oracle)

For more information about the Oracle Academy and Oracle certifications, please go to: www.academy.oracle.com

IT Networking Academy (Cisco)

For more information about the Cisco Academy and Cisco certifications, please go to: www.cisco.com

Program Highlight: IT Networking Academy (Cisco)

The IT Networking Academy (Cisco) prepares students for advanced study in a wide range of IT careers, including networking, cabling and wireless technologies. More than 3,000 students are enrolled in Cisco Academies across Maryland at the high school and college level. Cyber Security is an increasingly important part of Information Technology (IT) programs and represents expanding opportunities for employment and advanced education and training in Maryland. As students progress through these IT programs, additional options for Cyber Security and Information Assurance is provided.
Program Highlight: Project Lead The Way

Maryland’s Project Lead The Way (PLTW) program is a sequence of courses which, when combined with traditional mathematics and science courses in high school, introduces students to the scope, rigor, and discipline of engineering and engineering technology prior to entering college. There are eight courses in the PLTW program which are divided into three groups: Foundation (Principles of Engineering, Introduction to Engineering Design, and Digital Electronics); Pathway (Computer Integrated Manufacturing, Civil Engineering and Architecture, Aerospace Engineering and Biotechnical Engineering); and Capstone (Engineering Design and Development). Students in the Project Lead The Way pre-engineering program take all of the foundation courses, one pathway course, and the capstone course. Students can earn credit at PLTW-affiliated colleges and universities nationwide, including the University of Maryland–Baltimore County, the state’s university affiliate.

High School CTE Program

Pre-Engineering: Project Lead The Way (PLTW)

- Computer Integrated Manufacturing
- Civil Engineering

Manufacturing, Engineering, and Technology

Programs in the Manufacturing, Engineering, and Technology Cluster prepare students for a variety of career options through Maryland’s Career and Technology Education Programs of Study that lead to postsecondary education and employment. These include opportunities to become engineers, engineering technologists, engineering and manufacturing technicians, and related fields, such as product engineering and manufacturing sales and service. Students engage in real-world projects that strengthen their understanding of science, technology, engineering, and mathematics (STEM). They work in specialized and cross-functional teams to complete challenging projects related to design, manufacturing process applications, supply chain logistics, and quality improvements. Graduates are being educated for the high-performance workplace of advanced technologies that are common in the 21st century. Employers in the manufacturing and engineering sectors need a pipeline of highly qualified employees to remain internationally competitive, to develop and use new technologies, and to continuously improve the quality of life for Marylanders.

CTE Program Description:

Manufacturing Engineering Technologies

The Manufacturing Engineering Technologies program is designed to prepare students for the manufacturing industry and includes a focus on Manufacturing Process Design and Development, Production, Supply Chain Logistics, Health, Safety and Environment, and Quality Assurance and Continuous Improvement. Course content aligns with Maryland Manufacturing, Engineering and Technology career cluster pathway definitions and the standards outlined in the United States Department of Labor’s Framework of Competencies for the Advanced Manufacturing Industry. The focus is applying lean methodology and tools to effectively implement continuous improvement for success in a global, competitive business environment.

Program Highlight: Project Lead The Way

Maryland’s Project Lead The Way (PLTW) program is a sequence of courses which, when combined with traditional mathematics and science courses in high school, introduces students to the scope, rigor, and discipline of engineering and engineering technology prior to entering college. There are eight courses in the PLTW program which are divided into three groups: Foundation (Principles of Engineering, Introduction to Engineering Design and Digital Electronics); Pathway (Computer Integrated Manufacturing, Civil Engineering and Architecture, Aerospace Engineering and Biotechnical Engineering); and Capstone (Engineering Design and Development). Students in the Project Lead The Way pre-engineering program take all of the foundation courses, one pathway course, and the capstone course. Students can earn credit at PLTW-affiliated colleges and universities nationwide, including the University of Maryland–Baltimore County, the state’s university affiliate.
Transportation Technologies
Advances in science and engineering are producing major innovations in transportation technology, resulting in faster movement of people and goods at lower costs and with less environmental and safety risks. These innovations require higher skills to manage and maintain transportation equipment. High school programs provide opportunities for students to prepare for careers in the automotive industry or to explore aerospace engineering opportunities.

<td><strong>Automotive Technician (NATEF)</strong></td>
<td>The Automotive Technology program incorporates the Automotive Service Excellence (ASE) program certification standards and the National Automotive Technicians Education Foundation (NATEF) standards. The program consists of four courses: Suspension and Steering, Brakes, Electrical/Electronic Systems, and Engine Performance. Each course is aligned to Industry requirements for certification and success in the field. The end-of-course assessment provides students the opportunity to earn ASE student achievement certificate and college credit.</td>

| **Autobody/Collision Repair Technician (NATEF)** | The Autobody/Collision Repair Technician program combines technical, academic and workplace skills in an integrated curriculum in accordance with the Inter-Industry Conference on Auto Collision Repair (I-CAR), National Automotive Technicians Education Foundation (NATEF), and Automotive Service Excellence (ASE) guidance and directives. The program consists of the following courses: Non-Structural Analysis & Damage Repair, Paint and Refinishing, and Structural Analysis and Damage Repair. Each course has a NATEF end-of-course assessment providing students the opportunity to earn ASE student achievement certificate and college credit. |
| For more information about the NATEF, please go to: [www.natef.org](http://www.natef.org) | For information about the Inter-Industry Conference on Auto Collision Repair, please go to: [www.i-car.com](http://www.i-car.com) |

| **Medium-Heavy Truck Technician (NATEF)** | The Medium/Heavy Truck Technician program combines technical, academic and workplace skills in an integrated curriculum in accordance with all National Automotive Technicians Education Foundation (NATEF) guidance and directives. The program consists of the following courses: Diesel Engineering, Suspension and Steering, Brakes, Electrical/Electronic Systems, and Preventive Maintenance. Each course has a NATEF end-of-course assessment providing students the opportunity to earn ASE student achievement certificate and college credit. |
| For more information about the NATEF standards and industry certification, please go to: [www.natef.org](http://www.natef.org) | |
