Maryland Career and Technical Education (CTE) Programs of Study

Introduction
The Maryland State Department of Education’s (MSDE) Division of Career and College Readiness in collaboration with stakeholders revised the vision and direction for CTE in Maryland. The vision for CTE is for each student to have access and opportunity to engage in career programs of study that:

- align to high-skill, high-wage, and/or in-demand careers;
- lead to earning industry-recognized and/or postsecondary credentials that will allow entrance and/or advancement in a specific career cluster; and
- provide career-based learning experiences that require the application of academic and technical knowledge and skills in a work setting.

The Division of Career and College Readiness is in the process of engaging in a comprehensive review of each state CTE program of study. CTE programs of study that do not align to the vision of CTE will be revised or phased-out.

This document provides an overview of all state CTE programs of study within each of Maryland’s career clusters. CTE programs developed by individual school systems are not included in this document. CTE programs of study contain content aligned to academic standards, industry standards, and employability skills. CTE programs of study provide the opportunity for students to engage in workplace learning experiences and earn postsecondary and/or industry-recognized credentials.

Each career cluster in this document contains a table that outlines:

1. **Name of CTE Program of Study**
2. **Required Courses.** This document only identifies required courses in each program of study. CTE programs of study contain additional courses that students have the option to take. Required courses have been identified by industry representatives as the minimum required content necessary for entry into a career field. In order for students to graduate as a CTE completer, they must complete all required courses.
3. **Minimum Number of Credits.** CTE programs of study range from three to nine or more credits to complete. On average, most programs of study are four credit programs.
4. **Standards Used in Courses.** This section identifies the industry standard(s) used in each program of study.
5. **Industry Certifications that Students May Earn.** This section identifies industry credentials that student may earn upon completion of required courses and passing technical skill assessments associated with industry credentials. Each program of
study provides the opportunity for students to earn a State Skill Certificate issued by the Maryland Department of Labor if they complete a Youth Apprenticeship Program for their work-based learning experience.

6. **Postsecondary Credentials that Students May Earn Based on Statewide Articulation Agreements.** This section identifies the number of postsecondary credits that student can earn as part of statewide agreements with postsecondary institutions. Students must complete all requirements identified in that agreement in order to earn postsecondary credits. Local school systems may have additional agreements with postsecondary institutions that are not identified in this document.

7. **Career and Technical Student Organizations that Aligns to Program of Study.** Each program of study provides the opportunity for students to participate in Career and Technical Student Organizations (CTSOs). CTSOs are co-curricular learning experiences that extend course instructional content by engaging students in hands-on learning experiences connected to CTE programs of study.

Some columns have not applicable (N/A) written in them for specific programs of study. All programs of study do not have a statewide articulation agreement for students to earn postsecondary credits. Programs without a statewide articulation agreement have N/A written in the column.

All CTE programs of study must provide the opportunity for students to engage in work-based learning experiences. Work-based learning experiences must be coordinated with industry representatives from the identified career cluster. Work-based learning experiences include but are not limited to:

- ✓ Apprenticeships
- ✓ Internships
- ✓ School-based Enterprises
- ✓ Simulated Work Experiences
- ✓ Capstone Projects

This document does not identify the specific type of work-based learning experience offered to students enrolled in each program of study as it can vary by school system.

The ultimate goal of this document is to increase transparency and provide a foundation that informs the continuous improvement process for CTE. This document allows for identification of areas of promise and opportunities for growth as the Division of Career and College Readiness collaborates with stakeholders to implement requirements identified in the Maryland CTE Four-Year State Plan and recommendations identified in the Blueprint for Maryland’s Future.
Maryland Career and Technical Education (CTE) Programs of Study

Arts, Media, and Communication

Maryland offers great opportunities for careers in the Arts, Media and Communication Career Cluster. Students interested in this cluster combine creative abilities with technical skills and knowledge that prepare them for careers in: Digital Media Production, Graphic Communications, Web Design, Interactive Media and Game Design. Maryland CTE programs include a focus on communication, graphic communication and multimedia production. Working with employers helps ensure that these programs keep pace with the industry. Students can earn industry certifications and college credit toward advanced study in their career field of interest.

Maryland Career and Technical Education (CTE) Programs of Study

Business Management and Finance

Maryland CTE programs include a focus on financial services, accounting and finance, marketing, business management and business administrative support. These programs include options for students to earn industry certifications and college credit in a business-related career field. Students have the opportunity to take the College-Level Examination Program (CLEP) test in the areas of Financial Accounting, Principles of Management and principles of Marketing. The Advanced Placement (AP) Economics course is encouraged as a part of each program.

Advances in science and technology will continue to drive innovation in the design, construction and maintenance of buildings. These advances will also impact infrastructure systems, including new design concepts, construction materials and methods and the application of information technology. Maryland high school construction-related programs allow students to advance their knowledge in design, construction management or construction trades professions.

### Consumer Services, Hospitality, and Tourism

Programs in consumer services, hospitality and tourism prepare students for a variety of career options and further education. Each program includes options for students to earn industry certifications and/or college credit in a career field of interest. Students who pursue programs in culinary arts, restaurant management, lodging management or cosmetology engage in real-world experiences through internships and mentoring opportunities. These options allow students to apply their classroom instruction in meaningful ways and they give them (through licensure or certification) a jump start into the profession.

Environmental, Agricultural, and Natural Resources

The agricultural sector is a highly competitive industry creating new challenges in identifying global and domestic markets; improving business planning, financing, risk management, and productivity; and reducing costs. Advances in science and technology, in particular biotechnology, will continue to drive innovation and growth in this Career Cluster. Growing public concerns over natural resources, environmental quality and public health will continue to expand the role and scope of the natural resource management and environmental services sectors.

Health and Biosciences

CTE programs in the Health and Biosciences Cluster focus on preparing dedicated professionals with the knowledge and skills necessary to pursue challenging and rewarding careers and further education. Health and bioscience careers are among the fastest growing and highest in demand in the country as the population ages and health care needs continue to increase. CTE programs in this career cluster prepare students for positions in direct patient care settings and research and laboratory facilities, as well as for opportunities in business and management related to health care.

September 2020 Division of Career and College Readiness
Human Resource Services
Advances in scientific knowledge and increased public awareness of social problems and issues are contributing to a demand for high-quality social services. Public concerns over crime and the increased demand for legal intervention in businesses and communities will continue to drive the growth of law enforcement, emergency services and legal services. The continuous need for professionals in education fields, especially in the critical shortage areas, offers creative ways to engage young people early on in the teaching profession.

Information Technology

Information Technology (IT) professionals have the skills to determine customer and business needs and requirements, manage complex projects, and integrate software and hardware solutions. Maryland CTE programs include opportunities for students to focus on software development, programming, IT hardware and networking technologies. Cyber Security is an increasingly important part of IT programs and represents expanding opportunities for employment and advanced education and training in Maryland.

## Manufacturing, Engineering, and Technology

Programs in the Manufacturing, Engineering, and Technology Cluster prepare students for a variety of career areas, including opportunities to become engineers, engineering technologists or technicians. Students engage in real-world projects that strengthen their understanding of science, technology, engineering, and mathematics (STEM). By completing challenging projects related to design, manufacturing process applications and quality improvements, they are being educated for the high-performance workplace using advanced technologies. To remain internationally competitive, employers need employees who can develop and use new technologies that will continuously improve the quality of life for Marylanders.

## Transportation Technologies

Advances in science and engineering are producing major innovations in transportation technology, resulting in faster movement of people and goods at lower costs and with less environmental and safety risks. These innovations require additional skills to manage and maintain transportation equipment. CTE programs provide opportunities for students to prepare for careers in the automotive industry.

Work-based Learning

Supervised work-based learning allow high school students on-the-job experiences related to their career choice. Students may also elect to complete work-based learning through participation in a CTE program, Career Research and Development (CRD), or through the Apprenticeship Maryland (AMP) program. The programs are designed to link instruction with specific work experiences. These linked learning experiences are organized around a plan that is cooperatively developed by the student, a work-based learning coordinator, and employer to add value to and extend a student’s career preparation. Students in CRD or AMP can be placed in positions related to any of Maryland’s 10 Career Clusters.
